#### **Programme Descriptions**

#### **Epidemic Threshold**

Thresholds are calculated using the Moving Epidemic Method (MEM), a sequential analysis using the R Language, available from: http://CRAN.R-project.org/web/package=mem) designed to calculate the duration, start and end of the annual influenza epidemic. MEM uses the 40th, 90th and 97.5th percentiles established from available years of historical data to calculate thresholds of activity. Thresholds of activity for influenza and RSV are defined as follows: Below seasonal threshold, Low activity, Moderate activity, High activity, Very high activity. For influenza, thresholds from outpatient influenza like illness (Viral Watch Programme) are used as an indicator of disease transmission in the community and thresholds from pneumonia surveillance are used as an indicator of impact of disease.

\* EC: Eastern Cape; FS: Free State; GP: Gauteng; KZ: KwaZulu-Natal; LP: Limpopo; MP: Mpumalanga: NC: Northern Cape; NW: North West; WC: Western Cape

\*\*INF: Influenza; RSV: respiratory syncytial virus; BP: Bordetella pertussis; SP: Streptococcus pneumoniae

Reporting period 01/01/2018 to 15/07/2018

Results until end of epidemiologic week 28(2018)

#### **Comments:**

#### Influenza

The 2018 influenza continues. The season started in week 18 (first week of May), when influenza detections in the Viral Watch programme rose above the seasonal threshold, as determined by the Moving Epidemic Method. Influenza transmission is currently low and impact moderate.

ILI programme: In 2018 to date, specimens from 629 patients were received from 3 ILI sites. Influenza was detected in 68 specimens all identified as influenza A(H1N1)pdm09.

Viral Watch programme: During the same period, specimens were received from 860 patients from Viral Watch sites. Since April, when the number of specimens received started to increase, influenza has been detected in 359 specimens, 356 of which were identified as influenza A(H1N1)pdm09, four as influenza A(H3N2), 13 as influenza B, and three influenza A untyped due to low viral load.

In addition, influenza A(H3N2) was detected in three patients, A(H1N1)pdm09 in four, and influenza B in 14, before the start of the influenza season, most of whom had a history of travel or contact with tourists.

Pneumonia surveillance: In this time period, specimens from 2727 patients with severe respiratory illness (SRI) were received from the 6 sentinel sites. Influenza was detected in 162 specimens, 152 of which were identified as A(H1N1)pdm09, nine as influenza B, and one influenza A untyped due to low viral load.

#### **Respiratory syncytial virus**

The 2018 RSV season which started in week 9 (week starting 26 February) when RSV detections in pneumonia surveillance rose above the seasonal threshold, as determined by the Moving Epidemic Method, has ended although sporadic detections of RSV are still being made.

In 2018 to date, RSV has been detected in the specimens of 87 patients in the ILI programme, and 772 from patients in the pneumonia surveillance programme.

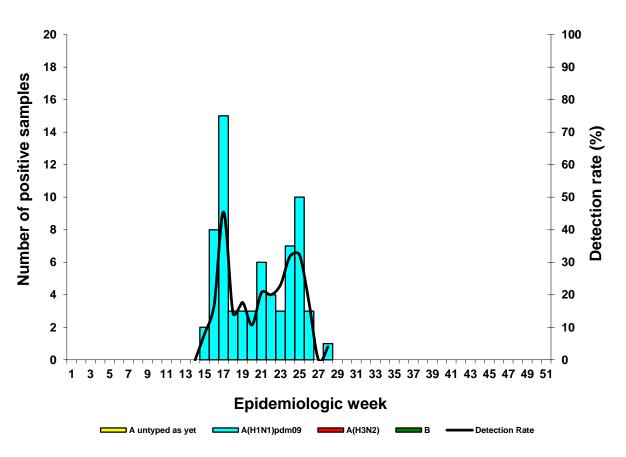

During the same period, 39 specimens from Viral Watch surveillance programme sites tested positive for RSV.

Reporting period 01/01/2018 to 15/07/2018

Results until end of epidemiologic week 28(2018)

Influenza-like illness (ILI) surveillance primary health care clinics

#### Figure 1. Number of positive samples\* by influenza types and subtypes and detection rate\*\* by week

\*Specimens from patients with influenza-like illnesses at 3 sentinel sites in 3 provinces from week 1–week 21 and from 2 sites in 2 provinces from week 22 (surveillance in Mpumalanga suspended since week 22). \*\*Only reported for weeks with >10 specimens submitted

# Table 1. Cumulative number of influenza type and subtype and total number of samples tested by clinic and province

Clinic (Province)	A not typed as yet	A(H1N1)pdm09	A(H3N2)	В	Total samples
Agincourt Clinic (MP)*		3			141
Edendale Gateway Clinic (KZ)		40			267
Jouberton Clinic (NW)		25			221
Total:		68			629

KZ: KwaZulu-Natal; NW: North West, MP: Mpumalanga\* Surveillance suspended at Mpumalanga site since week 22

Reporting period 01/01/2018 to 15/07/2018

Results until end of epidemiologic week 28 (2018)

Influenza-like illness (ILI) surveillance primary health care clinics

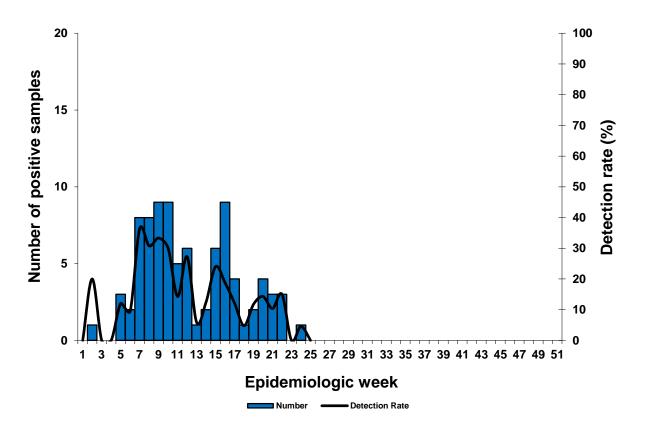

Table 2. Cumulative number of respiratory syncytial virus identified and total number of samples tested by clinic and province

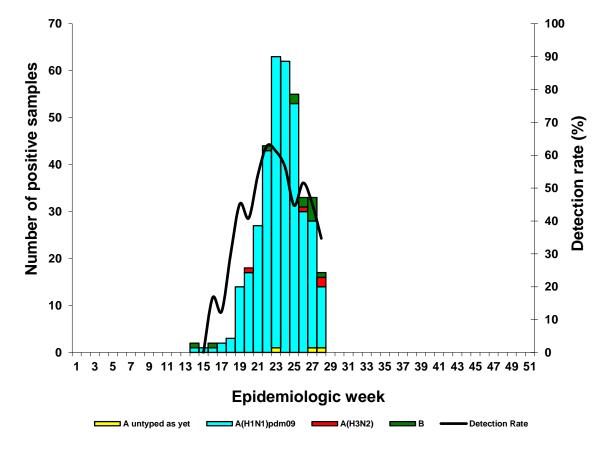

Clinic (Province)	<b>RSV Positive</b>	Total samples
Agincourt Clinic (MP)*	38	141
Edendale Gateway Clinic (KZ)	27	267
Jouberton Clinic (NWP)	22	221
Total:	87	629

KZ: KwaZulu-Natal; NW: North West, MP: Mpumalanga \*Surveillance suspended at Mpumalanga site since week 22.

Reporting period 01/01/2018 to 15/07/2018

Results until end of epidemiologic week 28 (2018)

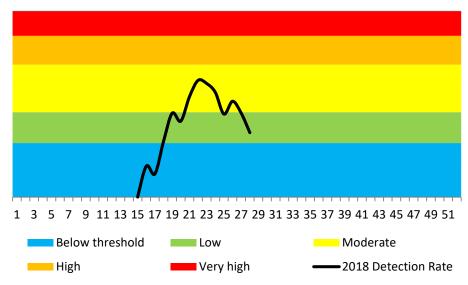

#### Influenza-like illness (ILI) surveillance Viral Watch

#### Figure 4. Number of positive samples\* by influenza types and A not typed as yet and detection rate\*\* by week

\*Specimens from patients with Influenza-like illnesses at 90 sentinel sites in 8 provinces \*\* Only reported for weeks with >10 specimens submitted.

Figure 5. ILI surveillance Viral Watch percentage influenza detections and epidemic thresholds\*

\*Thresholds based on 2007-2017 data (Excluding 2009)

Data are provisional as reported to date. Number of consultations/specimens are reported/analysed by date of consultation/specimen collection.

Reporting period 01/01/2018 to 15/07/2018

Results until end of epidemiologic week 28 (2018)

#### Table 4. Cumulative number of influenza type and subtype and total number of samples tested by province

Province	A not typed as yet	A(H1N1)pdm09	A(H3N2)	В	Total samples
Eastern Cape	1	50		3	75
Free State					8
Gauteng	1	192	4	6	431
Limpopo		14			21
Mpumalanga	1	20		2	70
North West		1			2
Northern Cape		3			12
Western Cape		76		2	192
Total:	3	356	4	13	811

To date in 2018, 80 patients have been tested for influenza at the time of entry into South Africa following travel abroad and 25 have tested influenza positive.

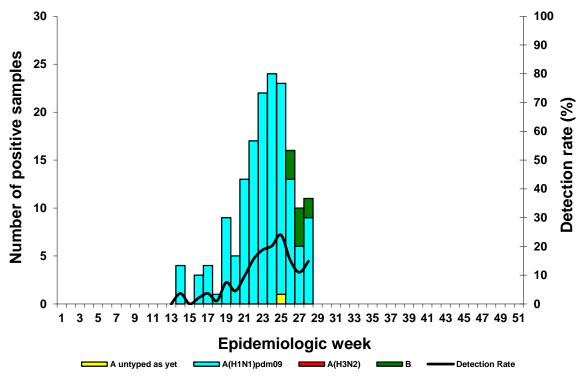

Patients known to have acquired influenza abroad are not included in the table or epidemiological curve.

Reporting period 01/01/2018 to 15/07/2018

Results until end of epidemiologic week 28 (2018)

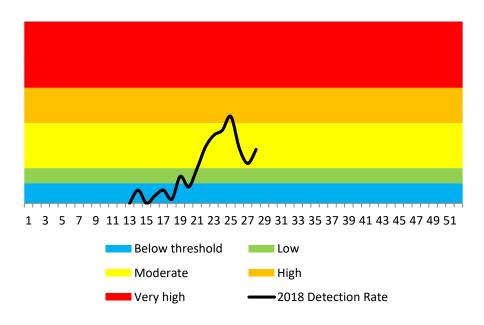

National syndromic surveillance for pneumonia

#### Figure 6. Number of positive samples\* by influenza types and A not typed as yet and detection rate\*\* by week

\*Specimens from patients hospitalised with pneumonia at 6 sentinel sites in 5 provinces \*\*Only reported for weeks with >10 specimens submitted

Figure 7. National syndromic surveillance for pneumonia percentage influenza detections and epidemic thresholds\*

<sup>\*</sup>Thresholds based on 2010-2016 data

Data are provisional as reported to date. Number of consultations/specimens are reported/analysed by date of consultation/specimen collection.

Reporting period 01/01/2018 to 15/07/2018

Results until end of epidemiologic week 28 (2018)

# Table 5. Cumulative number of identified influenza types and subtypes and total number of samples testedby hospital

Reporting period 10/04/2017 to 10/06/2018 Results until end of epidemiologic week 23 (2018) Private hospital consultations

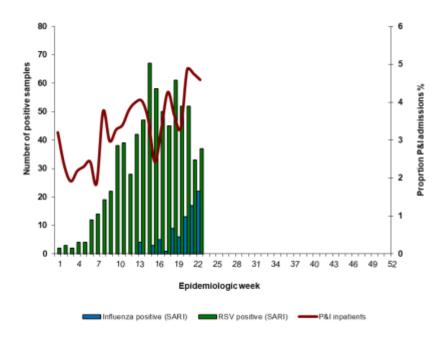

\* Hospital outpatient data from weekly reports of consultations to the Netcare hospital group. Discharge diagnosis is according to International Statistical Classification of Diseases and Related Health Problems coding by clinicians and does not represent laboratory confirmation of aetiology

\*\* Influenza positive specimens from the Viral Watch surveillance programme

\*Hospitalisation admission data from weekly reports of consultations to the Netcare hospital group. Discharge diagnosis is according to International Statistical Classification of diseases and Related Health Problems/ ICD by clinicians and does not represent laboratory confirmation of aetiology \*\* Influenza positive specimens from the national syndromic surveillance for pneumonia.
