Methods

Additional methods for this report can be found in the Weekly Epidemiologic Brief ([Link](#)). Data on province and district allocation was based on geocoding algorithm using in order of priority (i) completeness of patient data, (ii) submitting doctor's address, (iii) registering doctor's address and as final option, (iv) the guarantor's address data. The geocoding algorithm used the most complete data for assigning data on province and district where adequate information was provided on the lab request form at the time of sample collection. Data on district allocation may lag resulting in number of cases in recent weeks missing district allocation. Prevalence and incidence risk by districts should be interpreted with caution.

District trends of COVID-19 cases

Summary and graphs describing the trends by district and age group for Eastern Cape Province and Western Cape Province, can be accessed in the **Weekly Epidemiology Brief** published simultaneously with this report.
